

Sustainability Certificates, Microcredentials, Project Weeks and the like at Universities - Workshop

What is your network about?

Within the large complex of university and sustainability, the workshop is dedicated to a specific topic area: sustainability certificates, micro credentials, honors programs, interdisciplinary project days/weeks and the like. Such programs already exist at a number of universities and this workshop provides the space for a mutual exchange.

For students these programs offer the opportunity to focus on sustainability within the rigid framework of their study programs. For universities these programs provide the opportunity to create a flexible, adaptable space which is more complex than a regular course and less formal than a full study program.

Through this thematic focus, participants are addressed who are engaged in this area at their university or who would like to initiate them. The workshop thus becomes a place where participants are also active speakers who present their programs/ideas to each other, explore fundamental questions together, and discover different approaches to similar problems.

The workshop expands an existing german-speaking network to an international audience. Since 2018 a total of nine workshops have been held at different universities reaching participants from over 50 universities from Austria, Germany and Switzerland, see our website.

Why would you like to gather at the Higher Education Summit?

The Higher Education Summit is one of the few inspiring places where people get together who share an enthusiasm both for teaching/learning/education as well as sustainability. So, many like minded people will be there who might be interested in this concrete topic.

Who can join?

Anyone.

What is the url of your website (if you have one)?
