

Pension Plan - Workshop Money & Behaviour

Proposed Activity

During this two hour workshop you we will let you experience how money impact sustainable choices and sustainable behavior. In the first part of the workshop you play a card game. First, people experience how money works today. In a second round, you experience a different monetary system, the Sustainable Money System developed at Happonomy.

The playful approach makes you feel in a very powerful way how money is constantly working on you without you realizing it. The card game is followed by a discussion and a brief theoretical clarification building on the main insights from behavioral economics. The workshop will be supervised by two Happonomy experts, including the game designer.

The workshop is already used in an educational context: Teachers at Howest have been trained to facilitate the workshop with secondary school teachers who in turn can use this workshop in their classrooms.

Budget

The costs of the workshop is limited to the time needed to prepare and perform the workshop + transportation costs to Hasselt. Cost is estimated at 600 euro.
